DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 3-4, 8-9, & 13 are rejected under 35
 U.S.C. 102(b) as being anticipated by "Introducing SuperPrint:
 Software for Better Windows Printing" ("the SuperPrint manual").

Re claims 1, 4, & 9, the SuperPrint manual discloses (pages 17-21) a system for calibrating the halftone printing of an image in which a plurality of different tone reproduction calibration functions (which are equivalent to "calibrated tone-reproduction curves", as a curve is a well-known way of representing a function) are generated and stored (page 21). These calibration functions correspond to various halftone types and media (page 20, second paragraph), and are respectively applied when the user makes a determination to select the corresponding halftone type and medium (page 21, seventh paragraph).

Application/Control Number: 09/750,598 Page 3

Art Unit: 2624

Re claims 3, 8, & 13, the SuperPrint manual discloses the use of the described system for a printer using "toner" (i.e. a printer using a xerographic process) (page 20, first paragraph).

Allowable Subject Matter

- 3. Claims 2, 5-7, & 10-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 4. The following is a statement of reasons for the indication of allowable subject matter:

Re claims 2, 5-7, & 10-12, the art of record does not teach or suggest the recited curve comparing and updating arrangements in conjunction with the recited arrangement of halftone calibration in association with halftone types and media.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Shor et al and Shimizaki disclose additional examples of halftone printing calibration.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen M. Brinich at 703-305-4390. The examiner can normally be reached on weekdays 7:00-4:30, alternate Fridays off.

Application/Control Number: 09/750,598 Page 4
